WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cap: print open end up in black PETG, 100 % infill so no light passes.

46 mm across, 20 mm tall, floor 2 mm, bore 41.6 mm.

Disc: cut 41 mm from 3 mm white PTFE sheet with a knife and file;

sand the top face matte with 400 grit; do not touch it after.

Press the disc into the cap, sanded face up; a drop of glue at the edge.

Fit: the cap pushes over the shroud; the bore grips the 42 mm rim and

the rim rests on the disc, as it rests on an item when scanning.

The cap mouth stops 0.5 mm below the shroud flange.

Check: pushed fully on, the rim touches the disc all round.
