WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Print in black TPU 95A, flange on the bed, slow (about 20 mm/s).
Flange 47 mm across and 2.5 mm thick, with a 22 mm hole; the lip of the flange holds the LED window up into the body.
Cone 18 mm deep from the body: 30 mm across at the flange, 42 mm at the rim, 3 mm wall; 36 mm inside at the rim.
Three 3.4 mm holes on a 40 mm circle, at 90, 210 and 330 degrees (the first one toward the left side of the body).
Fit: three M3 x 10 screws with washers through the flange and the floor into the head block inserts. Snug only: TPU creeps if overtightened.
The shroud wears; it is replaced with the same three screws.
Check: the rim sits flat on a sheet of glass with no light under it.
